DETAILED ACTION

Claim Objections

1. Claims 15-22 are objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim.

Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form. The material to be processed does not further limit the apparatus. Appropriate correction is required.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 14-23 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

It is not clear whether a method, an article or an apparatus is intended to be the invention. For examination purposes, the independent claim will be presumed to be an apparatus for providing microwave heat. Appropriate correction is required.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 14-23 are rejected under 35 U.S.C. 102(b) as being anticipated by Dudley et al.(USPN 5272302).

Dudley teaches a heating apparatus comprising a magnetron, a waveguide disposed proximate said magnetron, a stirrer disposed proximate said waveguide and a susceptor disposed proximate said stirrer (figure 2 and col 1 lines 24-27, col 4 line 42 – col 5 line 11 and col 9 lines 6-49) It is noted that the structure of the joint is the same regardless of the type of reflow employed. A joint formed by convection reflow has same structure and properties as a microwave reflow joint. However in the instant claims the assembly will presumably be exposed to microwave radiation in the future, no exposure has occurred at this point. It is noted that a screen-printed bump would have similar characteristics as an electroplated bump.

6. Claims 14-23 are rejected under 35 U.S.C. 102(b) as being anticipated by Strauss et al. (USPN 5932075).

Strauss teaches a heating apparatus comprising a magnetron, a waveguide disposed proximate said magnetron, a stirrer disposed proximate said waveguide and a susceptor disposed proximate said stirrer (col 2 lines 45-52 and col 3 line 33 – col 4 line 4) It is noted that the structure of the joint is the same regardless of the type of reflow employed. A joint formed by convection reflow has same structure and properties as a microwave reflow joint. However in the instant claims the assembly will presumably be

exposed to microwave radiation in the future, no exposure has occurred at this point. It is noted that a screen-printed bump would have similar characteristics as an electroplated bum.

Response to Arguments

7. Applicant's arguments with respect to claims 14-23 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Fathi et al. (US 2003/0192884 A1, microwave oven) and Wendt et al. (USPN 4927991, microwave heater).
